

Tamika Robinson
Howard University School of Pharmacy

Tamika Robinson was accepted and participated in the Howard University Center of Excellence Summer Research program with an interest in HIV. Tamika not only participated in the summer research program, but she started to attend health fairs and other community service activities with her faculty advisor. In the past year, Tamika has also participated in blood pressure screenings, disseminated information to the lay public about HIV and has worked with a faculty mentor to provide smoking cessation lectures on drug therapy and herbals in the “Quit for Life Program” at Howard University Cancer Center.

During both her summer research program and her ambulatory care rotation in Infectious Disease, Tamika consistently demonstrated her capacity for hard work and her sense of intellectual curiosity. She showed a strong interest in HIV therapeutics during her summer research program in “Antiretroviral Prescribing Practices in Hospitalized Patients” and continued her project throughout her third year of pharmacy school. She works well with her peers as well as patients and communicates information effectively to both groups.

Tamika is a well-rounded student with honors both inside and outside of the classroom. She is the recipient of various scholarships and a member of Rho Chi Honor Society, which only affirms her intellectual capacity. Outside of the classroom Tamika has actively involved herself in many of Howard’s wide range of extracurricular activities.
